Tanknology Introduces TankCam HD

Austin, TX, January 29, 2018 — Tanknology is pleased to introduce TankCam HD, the next generation of Tanknology's industry-leading, patent-pending tank inspection system, TankCam. TankCam HD is remote, high-definition video camera system that allows underground storage tank (UST) owners to identify potential issues inside of tanks, including structural or lining problems, cracking, blistering, delamination or corrosion.

TankCam HD allows tank owners to pinpoint the cause of failed tightness tests, verify conditions after a tank cleaning, locate unused riser openings, verify overfill protection or visually inspect fuel conditions – and no fuel removal or excavation is required. Each TankCam HD inspection is performed by a highly-trained and certified Tanknology technician. Each cost-effective TankCam HD inspection results in a digital video record and detailed report that notes the condition of the inspected tank.

The patent-pending TankCam HD is a high-definition upgrade to the TankCam, which has been used to investigate thousands of USTs. The TankCam HD provides high quality images at distances up to 20' or more, allowing thorough inspections of most USTs through a single opening. The system is currently available in select markets. However, the company has plans to provide ubiquitous coverage by the end for the first quarter.

“With the aging single-walled UST population, a video camera inspection provides unparalleled access and information on the interior of tanks. In addition to a valuable assessment tool when acquiring existing facilities, TankCam is also extremely valuable when developing a capital upgrade or replacement program,” noted **Allen Porter**, President and CEO of Tanknology. “Our new TankCam HD system improves on our groundbreaking TankCam technology and allows owners to get a crystal clear picture of what’s happening inside their tanks so that they can make informed decisions about their next steps.”

To learn more about the TankCam HD system, visit tanknology.com or call **1-800-964-1250**.

About Tanknology

Based in Austin, Texas, Tanknology operates across America and around the world, providing environmental compliance testing and inspection services at more than 50,000 petroleum fueling and storage facilities per year, offering more than 20 compliance-related service offerings. Internationally, Tanknology licensees span more than 30 countries, providing services to the largest petroleum operators in the world. For more information, visit www.tanknology.com.
